Offering of material for inspection

3. (a) The manufacturer/exporter shall be responsible for carrying out inspection of the material prior to offering the same inspection so as to eliminate any material which is not upto the required standard and to rectify the rectifiable defects such as loose threads, knots, removable stains, etc. It is desirable that the manufacturer/exporter may flag all major defects so as to facilitate inspection.
- (b) It will be the further responsibility of the manufacturer/exporter to ensure that the number of two part-pieces and short length pieces, if any, do not exceed the requirements as stipulated in the contract.
- (c) The pre-inspected material shall be arranged in a well lighted shed.

- (d) The manufacturer/exporter shall apply for inspection in the prescribed proforma (Appendix).

Inspection criteria

4. (a) Inspection of the material shall be both with reference to specifications and flaws—
- The material shall be inspected according to the requirement of the overseas buyer in respect of specification particulars stipulated in the contract or specification particulars governing the quality number mentioned in the contract,
 - where the specification particulars are not stipulated, but the contract is with reference to shipment sample, the material shall be inspected on the basis of such sample,
- (b) In the case of dyed, printed and coloured woven material there will be no test for colour fastness unless the buyer expressly specifies the standards for colour fastness required.

Sampling for inspection

5. The Inspector shall select at random 20% of the total number of pieces offered for inspection for quality, viz., presence of weaving and other flaws. Out of the pieces selected for inspection, half this number subject to a maximum of five shall be examined for dimensional and constructional particulars, viz., width, length, ends/inch, picks/inch and weight per piece.

Drawing of samples

6. A minimum of 0.9 metres full width for every 5,000 metres or part thereof shall be drawn for determination of such characteristics as counts of yarn, composition and wooldop quality and any other tests as may be prescribed in the contract. In the case of dyed or printed material, where colour fastness tests are required to be carried out, 0.25 metre piece shall further be drawn representing each shade or colour.

Rejection criteria

7. The lot shall be rejected for any one of the following reasons :—
- If the average number of major flaws per piece in the sample selected for detailed inspection exceeds that shown in column (2) of the table below :

TABLE

Piece length	Average number of permissible major flaws per piece
(1)	(2)
Upto 10 metres	1
Above 10 metres and upto 20 metres	2
Above 20 metres and upto 30 metres	3

For piece length above 30 metres, one major flaw in the average number of permissible major flaws per piece shall be allowed for every additional 10 metres or part thereof.

- If any of the pieces in the sample selected for detailed inspection contains a serious flaw,
- If any of the pieces in the sample selected for detailed inspection does not conform to the specification particulars stipulated in the contract and/or of the approved sample,

Permissible tolerance

8. For determining whether the material conforms to the construction and other particulars stipulated in the contract and/or approved sample, the following tolerances shall be allowed :

Counts of yarn	± 4 units
wool top quality	± 4 units
fibre composition	± 3 units in percent.
ends per inch	
picks per inch	± 3.5%
width	± 2 cms.
Length	As per Trade & Merchandise Marks Act (Notification No. S.O. 2937 dt. 20-9-1962).

Weight/unit length (if specified) ± 5%

Inspection for construction

9. When determining construction particulars the following procedure shall be adopted :
- Width shall be measured at 3 different places in the piece.
 - Ends per inch shall be counted at 3 different places across the width of the piece. However, where ends cannot be easily counted, small pieces of definite lengths in the warp direction shall be cut out from both the ends of the fabric and counted by defraying the piece.
 - Picks per inch shall be counted at three different places in the piece. However, where picks cannot be easily counted, small pieces of definite length in the weft direction are cut out from both the ends of the fabric and counted by defraying the piece.

Packing and Sealing

10. The material inspected and passed shall be marked with the required stamps and packed into bales/cases/cartons in the presence of the Inspector. The bales/cases/cartons so packed shall be sealed by the Inspector.

Certificate

11. In respect of each lot inspected and not rejected under regulation-7, a certificate shall be issued to the party concerned by an officer of the Committee in this behalf. Such certificate shall be issued after completion of inspection and necessary laboratory tests.
